(510) 423-3651

Education

- **UC Berkeley** Class of 2018.
  B.S. in EECS, minor in Japanese

Experience

Netflix May 2023 — *present*
- Built a hyper-efficient firewall to mitigate the world's largest observed DDoS attacks.
- Identified and fixed critical TLS termination bugs at the cloud edge.
- Designed and implemented a new virtual addressing scheme to enable communication between greenfield Kuberetes deployments and legacy services.
- Successfully mentored a new college grad from hiring to their first promotion.

Color May 2022 — February 2023
- Built full stack account recovery functionality.
- Re-architected Color's faxing vendor integration to support self-serve share-to-provider functionality.
- Upgraded Color's lab management system to modern versions of Node.js and React.

Yelp February 2021 — April 2022
- Mitigated emergent P0 incidents involving Yelp's previous React server-side-rendering architecture.
- Successfully re-architected Yelp's approach to server-side-rendering.

Dropbox January 2020 — January 2021
- Added codegen functionality to Dropbox's public and private API edges to support additional API types.
- Proposed a network-level rate limiting system for all internal microservices.
- Modernized the public C# SDK from .NET Framework to .NET Core.

Yelp August 2018 — December 2019
- Built developer tools to support sandboxed microservice environments.
- Added VCR record-replay functionality to multi-service test sandboxes, dramatically improving run-time.
- Added test run-time and flake rate metric collection to nearly 200 services.

Prior experience available upon inquiry.

Other Involvements

Open Source Contributions
- Developed tools to root CDJ DJ players, and worked with AlphaTheta to responsibly disclose additional vulnerabilities.
- Contributed an encoder for the DXV codec to ffmpeg.

FIRST Robotics Competition Teams 5499 and 5419 February 2015 — January 2022
- Taught Berkeley High School students the basics of C++ and robotic control systems.
